Shashi Kant

7860735070 9559835359   skntjee@gmail.com   Noida

I have 2+ years in web development field . i had started my journey since third year of my college days and i created so many projects all by self using core php and then switched to MERN stack hence created these projects by myself first such as chat application in node js as well in php also , Youtube Clone in react js , Content managment system etc... . Currently i work in VALUE INNOVATION LABS(child compant of MTC) situated in noida Sector 16 . And here i have worked with 3 governement projects and created so many modules ,all of them currently in running state .

some of my projects name which i am currently working with is CCIL (cement corporation of india), EPIL(Engineering interprise project) and last one is FISCI . apart from that i runs my own blog name called techymaxx.com since past two years. A full stack developer authorised by intnernshaal and Linkedin . Hakcer rank certified in SQL . seeing to further boost and solve real world problems by that all skils i have aquired til now

WORK EXPERIENCE

Value Innovation Labs ● Noida

2021 - NOW

07/2021: Employee managment system (**Using React js**)   Source Code : **https://github.com/skntmax/**

ENTERPRISE LEVEL PROJECTS

1 (CCIL , **TECH STACK: React js , Node js , Postgres**) : it's an government experprise project known as cement cororation of India . bascailly it's an employee an file and leave management of this own company . like file forwarding to multiple deparments at multiple level and getting approval by approving authority at the end , applying leave ,monitoting of leave , giving access of such several modules feature exists in this app .

In this project mainly i have worked on fixing bugs in file management and leave modules . apart from that i have created a **Committe Module** . where fille will only be forwarded onl when untilll and unless all the committe members mark the file and give their own discription of that file . I have been working on this project about months .

2. (EPIL , TECH STACK: React js , Node js , Postgres) :   It's very similar to above project but modififed version of it . generally known as Engineering Enterprise project . but it have included some other modules with the old one . like E- **filing modules** , **Knowledge management module DAK maagement** , **E-toor** , **Medical reimbursment** . which was totally intiated by me from scratch . And in this projects i have created **E-toor module** and **Medical reimbursment module . Knowledge management** was also made by me but due to UI reasons it was discarded but working mechanism is same as was developed by me previuosly . Apart from that and except all that modules made by me i haved done fixing and enhancement , like in **E-filling , Leave module , Knowledge managemet , Dak module as well** . Overall these all modules are currently in running state and used by government employees of EPIL . I have been working on this project since last 5 months .

3.(ROZGAR.COM , TECH STACK: React js , Node js , Mysql):
It's our own company's project very similar to naukari.com but have inluded some different feature .latest version is still not live due to developing stage . In this project i have done data migration of 70,000 jobs with fully mapped with category , role , industry ,

Operating System: windows and Linux

INTERESTS

I like singing, cricket and travelling ..

ACHIEVEMENT

1. Digital marketing certification awarded by Google

2. Got 58.79% in TCS NQT exam

3. Runs a website called https://techymaxx.com

4. Hacker rank SQL certified

5. full stack developer certified by internshala

SOME LIVE MINI PROJECTS

1. Contact - List
2022 **-** 2022

https://react-demo44.netlify.app/contact
Using React/redux

Todo List
2022 **-** 2022

https://react-demo44.netlify.app/todo-redux
Using React/reduxList

employeer id , location , job title from the older version of rozgar.com . which was previusly running in mongo db where as new one is runnning on mysql db .

4.(HRMS , TECH STACK: React js , Node js , Mysql) : it's also our own company's project bascailly a employee management system . where i have worked with **payroll module** .

5.(ROZGAR.COM ,TECH STACK: React js , Node js , Mysql) : Worked on Payroll module and have integreated Zoom API in rozgar recruiter section where interveiwer can take their candidate interview on their own plateform without any third party apps such as zoom or google meet .

6.(ROZGAR EMPLOYER PORTAL , TECH STACK: React js , Node js , Mysql) : Integrated Zoom video in our own portal so that candiate can easily join and give their interview on our portal without using any third party software or intermediate .
